

VEENA KUMARI

Python Django Developer | Generative AI and LLM Enthusiast

+91 8895095165 | kumariveenasingh65@gmail.com | Gurugram, Haryana
[linkedin.com/in/veena-kumari-a03b321b7](https://www.linkedin.com/in/veena-kumari-a03b321b7) **Notice Period: Immediate**

SUMMARY

Python Developer with 3.8 years of experience building scalable backend applications using Django and Django REST Framework, with hands-on exposure to Generative AI and LLM application development. Experienced in RESTful API design, third-party service integration, real-time systems (WebSockets, Django Channels), and SQL databases. Recently built a Retrieval-Augmented Generation (RAG) based document Q&A system using LangChain and LLM APIs, extending backend expertise into applied AI. Immediately available to join.

EXPERIENCE

Python Developer • Webnmobapps Solutions Pvt. Ltd

07/2022 - 03/2026 | Noida, India

- Developed backend systems for 6+ applications using Python and Django, spanning healthcare, logistics, and e-commerce domains
- Built 20+ RESTful APIs powering mobile and web applications
- Integrated 3 third-party APIs (Twilio, Google Cloud Vision, Firebase) to extend platform functionality
- Implemented real-time notifications and in-app chat functionality using WebSockets, supporting 500+ concurrent users
- Optimized database queries, reducing average response time by 30%

Python Django Developer Intern • Consult IT Technologies Pvt. Ltd

06/2022 - 07/2022 | Greater Noida, India

- Assisted in developing and testing Django-based web applications over a 1-month internship, gaining hands-on experience with REST API design and Git-based version control under senior developer guidance

GENERATIVE AI / LLM PROJECT

DocQuery AI — LLM-Powered Document Q&A (RAG)

Python, LangChain, OpenAI/Gemini APIs, Vector Database (FAISS/Chroma) | June 2026 | Personal Project

- Built a Retrieval-Augmented Generation (RAG) application where users upload a document (e.g., a resume or PDF) and ask natural-language questions about its content
- Used LangChain to orchestrate document chunking, embedding generation, and the retrieval pipeline
- Integrated OpenAI and Gemini LLM APIs to generate context-grounded answers from retrieved document chunks
- Stored and queried document embeddings in a vector database (FAISS/Chroma) for efficient semantic search
- Explored agentic AI concepts (LangGraph, CrewAI, MCP) to extend the system toward multi-step, tool-using workflows

OTHER PROJECTS

Dental — Healthcare Appointment & Records Platform

Python, Django

- Built REST APIs for appointment booking and patient record management
- Established role-based access separating doctor and patient permissions
- Improved API performance through query optimization and efficient database indexing
- Added filtering, pagination, and search functionality to enhance usability

OCR Web Application — Google Vision Integration

Python, Django, Celery

- Engineered an OCR-based document processing system using Python and Django
- Connected the Google Vision API to extract text from scanned images and documents with high accuracy
- Enabled asynchronous processing via Celery to support concurrent multi-file uploads
- Applied image preprocessing techniques (noise reduction, thresholding) to boost OCR accuracy

- Delivered REST APIs for file upload, processing, and structured JSON output

E-commerce Funeral & Cremation Platform — Real-Time System

Python, Django, DRF, Stripe

- Delivered a full e-commerce platform with cart, checkout, and order management using Django REST Framework
- Processed secure payments via Stripe integration, including transaction validation
- Launched a real-time chat system using WebSockets (Django Channels) for user-to-admin communication, using Redis as the channel layer
- Configured JWT authentication and role-based permissions for secure access

Google Shopping Integration — SERP API

Python, Django

- Connected the SERP API (Google Search API) to retrieve real-time Google Shopping product data
- Created REST APIs to structure and deliver product data to frontend applications
- Reduced redundant third-party requests through efficient caching strategies

Transporter Platforms (UR Transporter & Snap Transporter)

Python, Django

- Developed backend systems for logistics platforms supporting booking, tracking, and user management workflows

Parcel Advantages Platform — Property & Parcel Management

Python, Django, MySQL

- Built a full-stack web application for property and parcel management with secure user authentication
- Designed a property listing module with map-based search for location-based browsing

SKILLS

Generative AI / LLM: LangChain, LangGraph, CrewAI, MCP, OpenAI API, Gemini API, RAG, Vector Databases (FAISS/Chroma), Prompt Engineering

Frameworks: Django, Django REST Framework, FastAPI

Databases: MySQL, SQLite

Web Technologies: HTML, CSS, JavaScript, Bootstrap

Tools & Platforms: Git, Bitbucket, Docker, AWS, Redis, Celery, Twilio, Firebase

Operating Systems: Linux, Ubuntu, Bash, PowerShell

EDUCATION

B.Tech in Computer Science Engineering

BPUT University, Bhubaneswar, Odisha

Intermediate — BSEB, Patna, Bihar

High School — BSEB, Patna, Bihar

CERTIFICATIONS

- Agentic AI: Build AI Agents with LangGraph, CrewAI & MCP — Udemy
- AWS Certification Training — Simplilearn
- Python Programming Training — Naresh I Technologies

LANGUAGES

Hindi: Native

English: Proficient
